RPC Error information	Solution
Clock system valid error	1. If error just appears several times, ignore it.
data check error, fec data flag error。	2. If endless error, first try to re-configure in DAQ IGUI.
data check ERROR: RTM module 15, CFID0: trgdata flag error!	3. If still endless, Stop->unconfig->Terminate->shutdown, one guy should go to underground of the hall to power off/on ROT(Fig. 1)*.
ROS configuration problem	Click Stop->unconfig->Terminate->shutdown Power off/on ROT(Fig. 1), Click Boot->initialize->Config->Start

*How to power off/on ROT: 1). go to underground of the hall, stand at the gate of the E-room and face to RPC support structure, find the RPC Racks near the E-room gate. The ROT switches are in one box hanged on the side of one rack. the switch is like Fig. 1 shows.

2). Turn all the ROT switches off (Just turn off the ROT box's switches which should labeled clean power on the box. The box at the side labeled dirty power, you should not be touched).

3) After 10 second, turn them on.

Fig.1   On/off switches of ROTs (please don't touch the far right switch which is not used for ROT. The current position is on)
